THE WORLD OVER

9.7 WHEAT ACREAGE CUT SHOWN

DROUGHT AREAS \$6,000,000 MONTH

WINNIPBO—Decrease of 8.7 per cent from 1938 wheat acreage in Wes-tern Canada is indicated in the first general crop report issued the first of the week by the Searie Grain Com-pany. The general reduction amounts to about 1.50% observed re-slower moisture conditions in Main-stern and the search of the con-trol of the search of the search of the conditional properties of the search of the search of the conditional properties of the search of the search of the conditional properties of the search of the search of the conditional properties of the search of the search

what mis date in 1933.

What acreage reduction is estimated at \$2 per cent in Manitoha, 12.8 per cent in Manitoha, 12.8 per cent in Alberta. Seeding in 93.6 per cent completed in Manitoha, 91.6 per cent in Sakatchewan and 97.8 per cent in Sakatchewan and 97.8 per cent in Manitoha, 11.6 per

WASHINGTON—The United States government today planned to pour \$6,000,000 a month into the parched farm states until the drought meanes is removed. Seven federal agencies united in the relief drive. Official observers believed expenditures would run on into the winter as new relief problem are reachebd.

WEATHER EFFECT ON WHEAT

Rain falling between 95 and 110 days after seeding is detrimental to wheat, according to J.H. Hopking to the haboratory division of the national which holy was tabled in the bose of commons some time ago. The most beneficial effect upon increased yields of wheat comes from rain failing within the first 3d days after seeding: following that, there is a progressite rain.

hal stations in Sansatenewan aum. beeta.

In the matter of temperatures, it has been demonstrated that higher than average temperatures are good for wheat during the first mostly of the growing assum. Inc., the way of the temperatures are unfavorable, and subsequent to that, between \$5 and 100 days, which temperatures are again beneficial.
